

ENOGGERA RESERVOIR HYDRO PROJECT

INDIVIDUAL REPORT 2026 (Construction methods)

Preamble

This Report is aimed at having you reflect on the decisions that you made in company with the other members of your group. In your professional life you will be frequently called on to explain the logic of decisions made. To this end, the Report is an analysis of the path by which the decisions were reached in relation to your chosen topic. This is part of communicating concepts to others and nothing is gained from a defensive or conditioned response. To be of benefit honest answers are required - no penalty will result. Self serving answers become obvious and will act to weaken your position.

As a guide to the approach you may take, the questions below will help to explore the scope of your decision process. Do not use the questions as a questionnaire - rather as a framework to order your thoughts, (total Report should be in the order of 2-3 pages).

Initial exploration

- Did everyone have a say or was the discussion dominated by one member - perhaps one with some experience in the area. (this is not uncommon and may well lead to the best decision).
- If this was the case did it cause concern in the group.
- How much investigation of the supplied documentation was undertaken before the first option emerged.
- Did you seek information outside the lecture and tutorial program
- Did you feel comfortable in moving outside the methods discussed in lectures and tutorials

Selection process

- Did you adopt your first option immediately as it was clearly the best.
- Did you explore further options even though you were certain that you would adopt the first option.
- Was the chosen option critically explored by all members.
- At what stage did consider how allied tasks might impinge on the method.

Mechanics of the selection

- How much did sketching and quantitative analysis assist you.
- To what extent was the company's available equipment a determinant in your choice.

Review process

- Did you subsequently change your decision in the light of a more comprehensive understanding of the interrelationship to other major tasks.
- Would you change anything substantially if you were to undertake the exercise again.
