Notebook 📄 🛡 Python 3 (ipykernel) ○ ≡

JupyterLab is a next-generation web-based user interface for Project Jupyter. It enables you to work with documents and activities such as Jupyter notebooks, text editors, terminals, and custom components in a flexible, integrated, and extensible manner. It is the interface that you're looking at right now.

For an overview of the JupyterLab interface, see the **JupyterLab Welcome Tour** on this page, by going to **Help -> Welcome Tour** and following the prompts.

See Also: For a more in-depth tour of JupyterLab with a full environment that runs in the cloud, see [the JupyterLab introduction on Binder](#).

Jupyter Notebooks 📄

Jupyter Notebooks are a community standard for communicating and performing interactive computing. They are a document that blends computations, outputs, explanatory text, mathematics, images, and rich media representations of objects.

JupyterLab is one interface used to create and interact with Jupyter Notebooks.

For an overview of Jupyter Notebooks, see the **JupyterLab Welcome Tour** on this page, by going to **Help -> Notebook Tour** and following the prompts.

See Also: For a more in-depth tour of Jupyter Notebooks and the Classic Jupyter Notebook interface, see [the Jupyter Notebook IPython tutorial on Binder](#).

Title

Heading 1

This is my first notebook. I am going to use jupyter notebooks in EGH404.

1. They are useful for
2. My second dot point ...
3.

[16]:

```
print("hello World!!")
```

hello World!!

[17]:

```
name='John'
```

[18]:

```
name='Lora'
```

[19]:

```
print('my name is ', name)
```

my name is Lora

About

This Jupyter Notebook has been developed based on "A Beginner's Python Tutorial" by Steven Thurlow. The original material has been ported to Python 3.
